

Blog Topics from ChatGPT5

Query:

Given my resume available at <https://kig.re/share/2025-07-konstantin-gredeskoul.pdf> and my current technical blog at <https://kig.re/> and my public github profile <https://github.com/kigster> and my rubygems profile <https://rubygems.org/profile/kigster> please provide ten potential technical topics for my blog. It's alright if there will be an element of study in order to publish it. For instance, I don't know ReactJS very well, but one of the projects could be building a client/server game with ReactJS on the front-end. For each topic, estimate number of minutes the post will take to read, and provide the score of popularity compared to the currently "hot" topics. Score of 0 means zero interest, and 100 means maximum popularity. Do it in the thinking mode.

Answer

Great — let's take a thoughtful, strategic approach to generating compelling blog post ideas for your technical blog.

Goals:

- Play to your **strengths** (e.g., Ruby, Bash, systems, PostgreSQL, Terraform, DevOps).
- Show curiosity and **expand into hot areas** (ReactJS, LLMs, serverless, TypeScript, etc).
- Engage your **audience**: startup engineers, backend engineers, devs who admire craftsmanship, and engineers interested in scaling.
- Create content that's **searchable**, **evergreen**, or **exploratory** (your style suits both well).

Step 1: What you already bring to the table

From Resume & GitHub:

- Expert in Ruby, Rails, Postgres, DevOps (Chef, Terraform, AWS).
- You've scaled real systems (ACA enrollment, email delivery platform).
- Recent interests: LLM platform engineering, Ollama, gguf.
- You like **clever engineering**, and building **resilient architectures**.

From Blog:

- Clear, thoughtful writing.
- You teach through deep dives and practical code — not fluff.

Step 2: Current Hot Technical Topics

Scored based on **developer interest in 2025**:

- LLMs (foundation models, fine-tuning) – **100**
- LangChain / Ollama / local inference – **90**
- Rust, Zig, Go for system programming – **85**
- React/TypeScript/Next.js – **80**
- Postgres scaling/replication – **70**
- Infrastructure as Code (Pulumi, Terraform) – **60**
- Clean Architecture, backend monorepos – **55**
- Unix philosophy and Bash tricks – **45**
- Ruby renaissance (Hanami 2, dry-rb, Sorbet) – **40**

Now: 10 Potential Blog Topics Tailored to You

1. “Running gguf LLMs Locally with Ollama: A Real Engineer’s Deep Dive”

Why: You’re exploring this space already. Most posts are fluffy — you can go deeper.

Length: 8–10 min

Popularity Score: 90

Bonus: Could open doors to platform engineering work at LLM infra startups.

2. “From Postgres to the Moon: Architecting Zero-Downtime Migrations Across Cloud Vendors”

Why: You’ve done this. Everyone *fears* this. Your real-world experience would be gold.

Length: 10 min

Popularity Score: 70

Bonus: This would gain traction on Hacker News or r/PostgreSQL.

3. “React for Backend Devs: Building a Turn-Based Game with Rails & React”

Why: A documented learning journey shows courage and versatility.

Length: 12 min

Popularity Score: 80

Bonus: Would appeal to backend devs trying React. Include GitHub repo.

4. “Ruby Isn’t Dead: Building Fault-Tolerant Systems in 2025 with Hanami + Postgres”

Why: You can showcase lesser-known modern Ruby stacks.

Length: 8 min

Popularity Score: 50

Bonus: May be shared in the Ruby Weekly, rubyonrails subreddit, or dry-rb communities.

5. “Reverse Engineering Terraform Modules Like a Hacker”

Why: Teach others how to really understand what's going on under the hood of infra code.

Length: 7 min

Popularity Score: 60

Bonus: Taps into your DevOps experience. Could feature one of your GitHub repos as a tutorial.

6. “How to Build Your Own Ollama-style CLI + Web App for Model Inference”

Why: Merges frontend, backend, and LLMs — a full-stack capstone.

Length: 12–14 min

Popularity Score: 85

Bonus: Could go viral in AI circles. Good portfolio piece too.

7. “The Anatomy of a CLI Gem: Lessons from Decades of Unix + Ruby”

Why: You have CLI gems on Rubygems. Many devs want to do the same.

Length: 6 min

Popularity Score: 45

Bonus: Low competition — and it's pure gold for aspiring OSS maintainers.

8. “10 Terraform Anti-Patterns I’ve Seen in Production (and Fixed)”

Why: Your real-world insights + practical advice is the right mix.

Length: 7–8 min

Popularity Score: 65

Bonus: Could be published on [Dev.to](#) or HashiCorp blog if pitched.

9. “Scaling for Spikes: How We Survived 10x ACA Enrollment Traffic”

Why: Real war stories attract devs and managers alike.

Length: 9 min

Popularity Score: 70

Bonus: Use traffic graphs or architectural diagrams to tell the story visually.

10. “Ollama + React + Ruby: A Full Stack LLM App in 100 Lines”

Why: Ambitious, meme-worthy, irresistible.

Length: 10–12 min

Popularity Score: 90

Bonus: “Full stack in 100 lines” format draws high engagement on social and tech aggregators.

Would you like me to expand one or two of these into full outlines (sections + code snippets + key takeaways)?
